

F2P Loss Ablation — Training Dynamics

Remnant · Qwen3-4B · seed 42 · 500 environment steps · single-run trajectories

Original signed F2P No w_t (NLL) Normalized $\alpha = .25, \beta = .25$ Normalized $\alpha = .5, \beta = .25$ Normalized $\alpha = 1, \beta = .25$

Lines and rolling intervals are descriptive trajectories, not confidence intervals. Raw objective magnitudes are not comparable across loss definitions.
